

RAG Test Document

Project Name: Atlas AI

Atlas AI is a fictional company founded in 2022 by Sarah Johnson and Michael Reed.

The company headquarters is located in Toronto, Canada.

Atlas AI develops artificial intelligence systems for document analysis and knowledge retrieval.

The first commercial product released by Atlas AI was called Atlas Search.

Atlas Search was launched on March 15, 2023.

The company currently has 45 employees.

The main programming languages used by the engineering team are Python, TypeScript, and Go.

Atlas AI stores vector embeddings in ChromaDB and uses local language models through Ollama.

The company's internal chatbot is named Atlas Assistant.

Atlas Assistant uses Retrieval-Augmented Generation (RAG) to answer questions based on internal documents.

In 2024, Atlas AI reported annual revenue of 2.4 million dollars.

The current CEO of Atlas AI is Sarah Johnson.

The company's mission is to make knowledge retrieval simple, fast, and private.
